→ Safety

A personal and professional commitment to proactively protecting the well-being of our employees, our contractors, our customers and the people of the communities in which we operate.

WHAT MAKE US DIFFERENCE

Elegantview windows services offer Building Products integrated solutions, including Double Hung Windows, Casement Windows, Sliding Windows and Doors, Picture Windows, and Windows and Doors Spray Painting Services.

✓ **FRAMING**

The window frame is a key consideration when designing for efficiency. It's proven that, our hybrid-reinforced vinyl products for commercial applications are time-tested in the field to provide strength comparable to aluminum with significantly improved thermal efficiency.

✓ **INTEGRAL COLOR**

Long-lasting aesthetic appeal is crucial to sustainable designs. That's why we offer patent-pending, thermally bonded color technology that resists heat buildup and provides surfaces up to 12 times harder than paint. Our color solutions utilize low heat-absorbing properties that resist the harmful effects of the sun for longer life and profile dimensional performance.

✓ **SERVICE**

We employ a comprehensive team of commercial market experts, including product specialists, technical service representatives, product design engineers and material science technicians, who are dedicated to helping architects and fabricators meet their product performance goals.

FRAMING SYSTEMS EVOLVED.

Aluminum has long been the material of choice for shop-built windows used in punched-opening applications because of its flexural strength, color options and large number of brand and supplier choices. However, aluminum's high thermal conductivity and propensity for allowing heat to readily transfer have limited its use in high-energy performance applications.

Environmental programs aimed at improving total building energy performance, such as ENERGY STAR® and LEED®, are demanding materials and systems that perform better than aluminum, yet meet structural performance requirements. That's where our hybrid-reinforced vinyl systems shine. You can have it all with a system that improves thermal performance while ensuring structural integrity and providing an array of long-lasting color options.

VINYL—THE ENVIRONMENTAL CHOICE.

Vinyl has a number of environmental benefits that make it an ideal choice for a variety of building applications from piping systems, wire and cable insulating, to roofing and window framing material.

Vinyl is truly the environmental choice because it is:

- ✓ Process efficient, requiring less energy to produce than most major plastics.
- ✓ Inherently energy efficient, helping to reduce greenhouse gas emissions during their long life cycles.
- ✓ Durable, resisting corrosion and effects of weathering for years of maintenance-free service.
- ✓ Recyclable with more than 18 million pounds of post-consumer vinyl recycled annually according to The Vinyl Institute.*
